AMETEK Powervar Announces Retail Technology Rackmount Series of UPM Solutions

WAUKEGAN, IL, JULY 13, 2017 -- AMETEK Powervar, a leading supplier of uninterruptible power manager (UPM) solutions for more than 30 years, is excited to announce the release of the Retail Technology (RT) Rackmount Series for power conditioning of server-based, point-of-sale (POS) terminals and back office equipment. The RT series includes two new products and is an ideal fit for hospitality, retail and restaurant settings.

Today's POS platforms must be resilient in the face of harsh and noisy electrical environments. Electrical noise from a wide variety of nearby devices can compromise the vital connections between individual POS terminals and corresponding data processing systems housed in back offices. The routine activity of neon light displays, kitchen blenders, ice machines and other dynamic loads can destabilize the power, which supports sustainable of POS operations.

Since rackmount servers already are commonly deployed as convenient, space-saving back office IT infrastructure, the Powervar RT Rackmount Series is both straightforward to implement and intuitive to use. With its 19-inch rackmount design, it can be easily slotted into an existing back office rack. At the core of each UPM offering in the RT line is an advanced power conditioner that cleans up hot, neutral and ground signals to produce higher-quality power for mission-critical POS applications.

"The RT Rackmount Series guarantees comprehensive protection from electrical noise and disruptions for modern POS systems," states Powervar's Director of Sales and Marketing Chris Walsh. "With a low-impedance isolation transformer and line-interactive operation, each RT UPM is built from the ground up to ensure fully isolated and conditioned power, whether it is operating on battery or via utility electric."

User-friendly hot-swappable batteries, with three-year warranties, make the RT Series a highly dependable true sine-wave battery backup solution for the back office. Its batteries comply with a spectrum of regulations from the National Electrical Manufacturers Association, the Department of Transportation, and the Federation Aviation Administration.

Customers can expect the highest levels of support and product quality from AMETEK Powervar in finding the right solution for their terminals and back offices in any industry that relies on a server-based POS infrastructure.

About AMETEK Powervar

AMETEK Powervar (www.powervar.com) is a global provider of power management systems, headquartered in Waukegan, Illinois, with international sales and service offices in United Kingdom, Canada, Germany and Mexico. The company's primary products include transformer-based power conditioners and uninterruptible power supplies (UPS), which support a plethora of diverse vertical markets.
