AMETEK Powervar announces Security II Series of UPMs

WAUKEGAN, IL, March 2, 2017 -- Powervar, a leading supplier of power conditioning solutions and uninterruptible power managers, is proud to announce its new Security II Series of UPMs. Conceived as a major upgrade over the previous Security I family, Security II UPMs are now available in both tower and rackmount configurations from 700VA up to 3000VA. The units are available in 120, 208 and 230V solutions.

The Security II line offers the most intuitive design and feel ever for a UPM, as well as enhanced performance and full compliance with standards such as UL 1778 5th Edition. Plus, the increased power factor and efficiency of the Series II enables the operation of even large pieces of equipment with a smaller profile UPM.

With an easy-to-read graphical user interface, it's simpler than ever to gain detailed insight into metrics such as power status and load percentage. System diagnostics are also straightforward to obtain and review for all Security II line UPMs.

Security II is one of the first solutions of its kind available in a special medical version, with UL 60601 3rd Edition with Risk Assessment for UPSes. The low impedance isolation transformer at the heart of the Security II UPMs protects your medical equipment from voltage spikes and other disturbances. A backup battery provides further peace of mind.

The new software inside the Security II gives users total remote control of their UPS systems. Specialized URLs provide instant access to tower and rackmount models, allowing remote viewing of UPS status while enabling changes to load sharing.

"The Security II UPMs are our most powerful, intuitive and versatile power conditioning solutions to date," explained Chris Walsh, Director of Sales and Marketing at Powervar. "With their unique combination of superior efficiency and redesigned display technology, they are an ideal solution not only for medical providers, but for organizations across all industries in search of UPMs that can protect their mission-critical instruments and control the power variable."

Customers are assured of the utmost product quality and support from Powervar, a leader in power conditioning solutions for over 30 years. The Security II Series has been designed,

manufactured and tested to be a cutting-edge true sine-wave UPS system suitable for any vertical market.

About AMETEK Powervar

AMETEK Powervar (www.powervar.com) is a global provider of power management systems, headquartered in Waukegan, Illinois, with international sales and service offices in United Kingdom, Canada, Germany and Mexico. The company's primary products include transformer-based power conditioners and uninterruptible power supplies (UPS), which support a plethora of diverse vertical markets.
