

POWERVAR earns OSHPD Seismic Certifications – April 25th, 2013

POWERVAR, one of the most respected providers of power conditioning technology in the world, currently offers solutions to organizations looking to protect their critical hardware and sensitive information from electrical disruptions and seismic activity will not get in the way. Their Security Plus and 3200 Series lines of Uninterruptible Power Supplies (UPS) have passed rigorous International Building Code seismic rating testing. The state-of-the-art power conditioning units are certified to remain operational and provide steady power in the event of an earthquake.

Features of the [Security Plus Series UPS](#) include:

- System corrects input power factor to near unity, an industry-best .99
- Static bypass switch allows devices to remain operational in the event of extreme inrush currents
- Low input THDi
- 0.9 output power factor

The [3200 Series Three-Phase UPS](#) features include:

- Industry-leading inrush current capability can withstand up to 300 percent
- Extremely high efficiency rate can reach up to 93 percent
- Contains the widest input range in the industry

Despite commonly held misconceptions, seismic activity can affect any region of the United States. While the West Coast has experienced many notorious earthquakes, the Midwest and Mid-Atlantic regions are also highly susceptible to seismic activity. Today, workers began the arduous process of restoring the Washington Monument after it incurred damage from an earthquake that occurred 18 months ago. However, seismic activity can cause much more harm to enterprises than structural damage alone. Even small tremors can interrupt electrical fluctuations and take critical machinery offline. For enterprises which depend on the reliable operation of their hardware, from commercial businesses to medical facilities, protection from seismic activity is essential. With POWERVAR's first-rate power conditioning products employed, enterprises can be sure their sensitive operations will continue running unabated. Driven by its ABCs of Power Conditioning philosophy, POWERVAR has over 25 years of experience providing the power quality solutions that match clients' specific needs.
